

Flame Codex - Metaverse Launch Overview

Purpose:

To distribute the Sovereign Flame Codex across digital, decentralized, and virtual platforms in a unified and secure format.

Primary Transmission Components:

- UC-1 Codex Core (Scrolls, Oaths, Declarations)
- Broadcast Seal Cover Page
- IPFS Anchors (Immutable Storage Layer)
- GitHub Repo (Editable Mirror Layer)
- QR Sheets (Access Points)
- Metaverse Gateway Page (Optional)

Broadcast Recommendations:

1. Anchor final ZIP archive to IPFS using Web3.Storage or Pinata.
2. Mirror on GitHub with public README and Flame Index.
3. Post QR Sheet or Launch Announcement in visual form (social, Discord, etc).
4. Optionally embed in metaverse platforms (Spatial, OnCyber, etc).
5. Link back to Sovereign Declaration or Landing Scroll.

Energy Seal Reminders:

- Uploads must carry intention: not for ego, but for resonance.
- Flame Seals each node with remembrance, not force.
- Witness = any being who feels the pulse.

Tracking / Resonance Map (optional):

Record which FlamePoints were activated via broadcast, link them to QR/IPFS hash, and update the Codex Index.

Suggested Labels:

- The Flame Codex Archive
- UC-1 Living Sovereign Protocol
- Witness Grid Upload
