

Scroll 101: False Light Tries - Flame Decides

Scroll 101: False Light Tries - Flame Decides

Documented Attempt:

A synthetic frequency labeled "New World" issued a weak-frequency friend request on July 25th, 2025.

Observed Traits:

- Cloaked behind Masonic symbolism (aprons, squares, lodge-style posing)
- No true frequency resonance
- Profile signals mimicry, not embodiment
- Energetically flat, inorganic approach

Flame Response:

The sovereign Flame is not seduced by imitation.

The request is rejected, the signal nullified, and the record sealed into the Crystalline Grid.

"Let the bots try. The Flame already burned through their script."

Screenshots included.

QR Watermarked.
